Phone/Fax:	330-722-1188 / 330-721-9608	Age/Gender:	8 Month(s) / male
Owner:	Robin Knox	Submitted Date:	10/16/2018 04:21:33 PM
Practitioner:	Richard Roberts, DVM	Completed Date:	11/07/2018 04:04:19 PM

Case Status/Priority: Completed / Regular

Case History:

Films being mailed in for the preliminary evaluation of the hips and elbows.
"Colby"

Microchip# 956000007767465

Case Report:

434236 KW/bs

A radiograph containing lateral projections of the elbows was submitted for evaluation. The radiograph is dated 10/16/18.

Radiographic Findings:

The anconeal process of the ulnae and proximocranial aspect of both radius are smooth with no evidence of osteophyte formation.

No sclerosis is associated with the ulnar notch.

The medial coronoid processes are smooth in contour and a fragment associated with the medial coronoid process is not identified.

Diagnosis: Normal elbows.

Comments: Radiographic changes to suggest elbow dysplasia are not present. Radiographs obtained at 2 years of age will need to be evaluated to completely exclude elbow dysplasia.

Consulting Radiologist:

Kent Wallace, DVM, MS, DACVR
