Report for case 412409

Client:	
Organization:	Black Canyon Veterinary Clinic
Email:	blackcanyonvets@gmail.com
Phone / fax:	9707872282 / 9704174946
Owner:	Tammie Rendon
Practitioner:	Rachel Blankmeyer DVM
Patient:	Ranch House Locked and Loaded by Rocky Mtn
Species/Breed:	Dog : Bernedoodle Poodle
Age:	10 Months
Gender:	male
Submitted Date:	3/5/2018 4:42:21PM
Completed Date:	3/5/2018 6:12:39PM

Comments: Radiographic changes to suggest elbow or hip dysplasia are not present. Based on the OFA scheme of the hips the hips would be rated as excellent in conformation. Radiographs obtained at two years of age will need to be obtained to completely exclude elbow and hip dysplasia and to establish a final rating for the coxofemoral joints.

Case status: Completed

Case notes:

hips and elbows radiographs for evaluation per OFA standards

Registered name: Ranch House Locked and Loaded by Rocky Mtn
Short name: Colt

The report:

412409 KW/lb

Three digitalized radiographic images containing projections of the pelvis and elbows were submitted for evaluation. The radiographs are dated 03/05/18.

Radiographic Findings:

Both femoral heads are located in their respective acetabula and are congruous with the acetabular rims.

Greater than 50% of the right femoral head and approximately 50% of the left femoral head are located medial to the dorsal acetabular rims.

No osteophyte formation is present on the femoral necks or acetabula.

Alignment of the patellae with the femurs is normal.

Muscle volume in both hind legs is within normal limits.

The anconeal process of both ulnae and proximocranial aspect of both radii are smooth with no evidence of osteophyte formation.

No sclerosis is associated with the ulnar notches.

Both medial coronoid processes are smooth in contour and a fragment associated with the medial coronoid processes is not identified.

Diagnosis: Normal pelvis and elbows.
