

Keepsake Goldendoodles

Puppy Vaccination schedule

Your puppy should be vaccinated again at 12wks, 16wks, and 17wks. Your puppy will then receive vaccines again at about 16months of age, then annually or we encourage our families to have their puppy as an adult be titered (a blood test that measures the dogs antibodies to the vaccine) rather than to have more vaccines unnecessarily. Please see your puppy packet or our website for more information about titering.

All of our puppies leave with their first set of vaccines at 8 weeks of age DHPP, wormed and have been fecal tested.

At 12wks Dhlpp and Bord

16wks a Dhlpp and Bord

17wks Rabies vaccine

We have found that our puppies can become sore from getting too many injections at one time, and recommend separating their rabies; please speak with your Veterinarian. We have not had any problems with our puppies receiving leptospirosis as part of their vaccine protocol.

Heart worm prevention should be given all year round; we recommend Iverhart, Interceptor, Proheart injection (this lasts up to 3 months) or Heartguard. We **DO NOT RECOMMEND** Trifexis or Bravecto. Test as your veterinarian recommends. Your puppy should also be on flea prevention during the spring and summer months.

We recommend using Frontline Plus for flea prevention.

For a combination of Heartworm and Flea Prevention we recommend: Revolution

Our puppies are vaccinated & wormed by our veterinarian on the following schedule; please speak with your veterinarian on the schedule they would prefer.

6wks wormed w/Panacure

8wks 1st Dhpp, fecal exam

12wks 2nd Dhlpp, Bord

16wks 3rd Dhlpp, Bord, Rabies Vaccine

If you or your veterinarian have any questions please don't hesitate to give us a call at 330-620-8305
