Report for case 346697

Client:	
Organization:	Medina County Animal Clinic
Email:	mcacrlr@yahoo.com
Phone / fax:	330-722-1188 / 330-721-9608
Owner:	Farmer
Practitioner:	
Patient:	Winston
Species/Breed:	Dog : Goldendoodle
Age:	2 Years
Gender:	male
Submitted Date:	6/14/2016 2:37:58PM
Completed Date:	6/15/2016 9:27:33PM

Case status: Completed

Case notes:

The report:

346697 KW/lb

A radiograph containing a ventrodorsal projection of the pelvis was submitted for evaluation. The radiograph is dated 06/10/16.

Radiographic Findings:

Both femoral heads are located in their respective acetabula and are congruous with the acetabular rims.

Approximately 50% of the femoral heads are located medial to the dorsal acetabular rims.

No osteophyte formation is present on the femoral necks or acetabula.

Alignment of the patellae with the femurs is normal.

Muscle volume in both hind legs is within normal limits.

Radiologic Diagnosis: Normal pelvis.

Comments: Radiographic changes to suggest hip dysplasia are not present. Based on the OFA scheme of evaluating the hips, the hips would be rated as good in conformation. The clinical status of the patient will determine if further assessments radiographically would be necessary.

Consulting Radiologist:

Kent Wallace, DVM, Ms, DACVR
